### **DETAILED ACTION**

1. This action is responsive to the amendments filed April 3, 2008.
2. The 35 USC section 101 rejection to claims 1 and 3 is withdrawn in view of Applicant's amendments.
3. Claims 1, 3-8, 11-13, and 19-20 have been examined, and all remained pending claims now are being allowed (renumbered 1-12).

### **Examiner's Statement of Reasons for Allowance**

4. As Applicants pointed out in the Remarks, the prior art of record (Morshed and Morganti) do not disclose and/or fairly suggest at least claimed limitations in independent claim 1 "...blocks of metadata having a second order, wherein the unwind rewriter reorders the first plurality of blocks in accordance with a second unwind table and a second unwind information block, wherein reordering the first plurality of blocks in accordance with a second unwind table and a second unwind information block further comprises determining when basic blocks identified in a single unwind table associated with the first order of blocks are associated with more than one unwind table associated with a current order of basic blocks, creating a new region header describing a region of zero length when the basic blocks identified in the single unwind table associated with the first order blocks are associated with more than one unwind table associated with the current order of basic blocks, and copying non-when action descriptor records from the unwind information block into the second unwind information block when the basic blocks identified in the single unwind table associated with the first order blocks are associated with more than one unwind table associated with the current order of basic blocks, wherein the first plurality of blocks are reordered in response to a modification of the sequence of binary instructions within a procedure, such that the second plurality of blocks of metadata accurately represents the same runtime semantics as that of the unmodified sequence of binary instructions" and in such manner similarly recited in independent claims 4, 11, and 19-20 (Remarks, pages 9-15).

The prior art made of record in this Office Action, such as:

US Patent No. 6,014,515 merely discloses an enhanced unwind facility, which allows an unwind library to compute current regions' attributes by indexing;

US Patent No. 6,293,712 merely discloses a stack unwind data structure; and

US Patent No. 7,007,198 merely discloses an exception handling system, which begins an unwind phase when a junction frame that is interested in the exception is found.

However, these claimed limitations are not present in the prior art of and made of record and would not have been obvious, thus all pending claims 1, 3-8, 11-13, and 19-20 are allowed.
